

Supplementary Data

Figure S 1 Sublethal damage repair curves for PC-3 (left) and U2OS (right) cells following exposure to two identical fractions (3 Gy X-rays or 0.75 Gy alpha particles, top) or mixed exposures (bottom), as in Figure 3. Here, instead of a different repair rate for each exposure and cell line, only a single repair rate is fit for all irradiations in each cell line. This can be seen to remain in good agreement with the data, and is not statistically significantly different to the independent repair models presented in Figure 3.

		X-ray	Alpha	X-ray + Alpha	Alpha + X-ray
PC-3	α (Gy^{-1})	0.55 ± 0.05	2.0 ± 0.2	1.2 ± 0.2	1.4 ± 0.1
	β (Gy^{-1})	0.04 ± 0.01	0	0	0
U2OS	α (Gy^{-1})	0.28 ± 0.03	2.6 ± 0.2	1.7 ± 0.2	1.5 ± 0.1
	β (Gy^{-1})	0.052 ± 0.009	0	0	0

Table S 1 Linear quadratic model fit parameters for the dose response curves presented in Figure 2.
